

To make sure any fragile items you want to post get to their destination safely, we recommend shipper to follow some parcel packing guidelines. These tips will help minimise the risks of damages during the loading, unloading and transit of goods under bad weather, poor road conditions and other hazardous and accidents.

WARRANTED PACKED BY PROFESSIONAL PACKERS AND/OR PACKED IN THE STANDARD EXPORT MANNER FOR THE INTENDED CONVEYANCE

Any cargo must be packed by the professional packers in the standard manner for the intended conveyance and any claim rejection by the insurer in the event that the loss is due to insufficient packing/ storage etc

How to pack the package

Use strong and undamaged cardboard boxes.

Use dividers when sending more than one item.

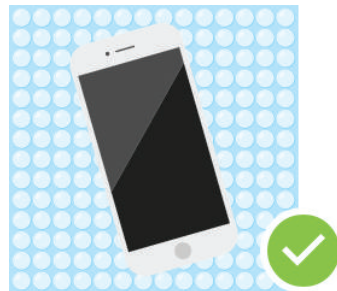

Close properly and secure the box with packaging tape.

Select a cardboard box of appropriate size and shape.

Peel off the old labels from the used cardboard box.

Wrap in bubble foil individual items in the shipment.

Use packaging chips for sealing.

Use envelopes with bubbles.

Don't pack

Do not use old and damaged boxes.

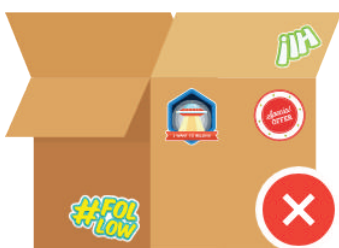

Do not send items in gift packaging.

The "fragile" label does not substitute the reliable package.

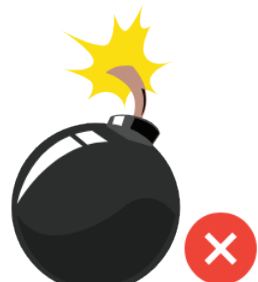

Remember to seal the goods in the cardboard box.

Remember to remove old labels.

Do not overfill the cardboard box.

Do not send prohibited and dangerous goods.

Do not use bags for outer packaging.

STANDARD OF PACKAGING

Wrapping each item individually with a bubble wrap (at least wrap the item with 3 layers of bubble wrap) and carefully placing it in a double thickness box. It is advisable to use "an industrial bubble wrap".

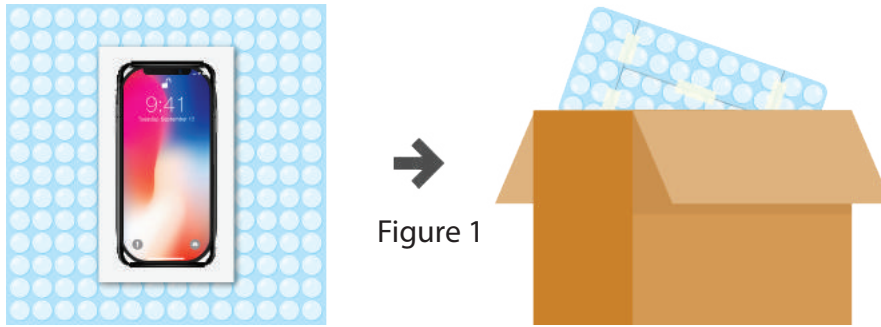

Figure 1

Next, after use the "bubble wrap", we suggest you to use "PE Stretch Film" in order to maximize the protection as to avoid the impact from other heavy shipment.

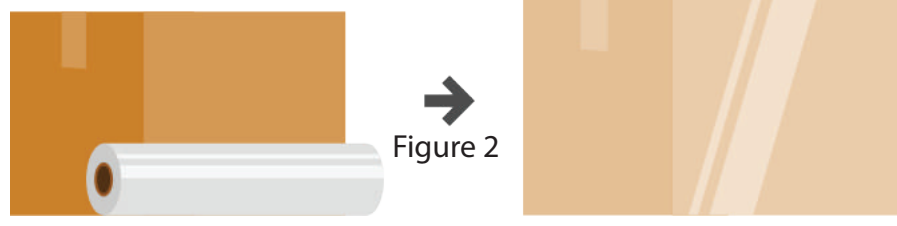

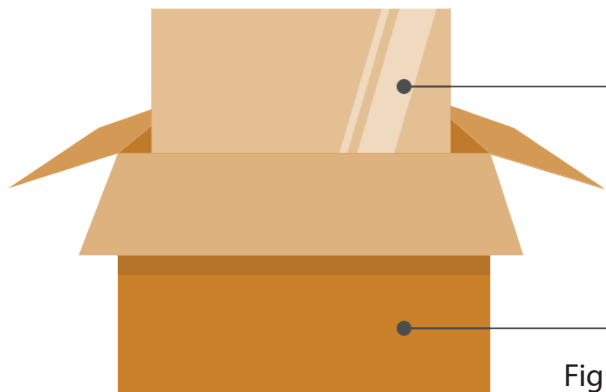

Figure 2

Kindly put the box inside the other box (Box-in-Box Packaging Method) as to protect the inside box and item from damage.

Smaller inner box wrapped in 4" of Bubble wrap

Sturdy outer container

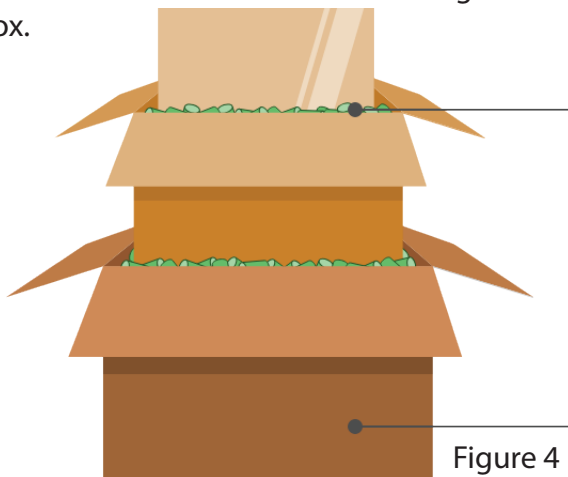

Figure 3

Basic Box-In-Box Packaging Method

Wrap product/item individually with at least 3 layers of bubble wrap/ 2" (5.08 cm) thickness of bubble wrap or foam material to fit snugly inside a corrugated box. (See Figure 1)

- A) Use a second, outer container that is at least 6" (15.24 cm) longer, wider and deeper than the inner box.
- B) Fill the bottom, sides and upper of the outer box with 2" to 3" (5.08cm cm to 7.62 cm) of cushioning material.
- C) Place the inner box in the center of the outer box on top of the cushioning material.
- D) Fill voids of all sides with more cushioning material (e.g loose-fill materials/foam materials/ Styrofoam balls.

Seal box.

Packing material (i.e. loose-fill materials/ foam materials/ Styrofoam Balls) minimum of 3" thickness on each side

Sturdy outer container
